

3-D printing

Our students in this assignment are in 5th and 7th grade and we had six students participate in the assignment.

We told the students that they had the choice of doing a pen stand, nameplate for suitcase or a woofer for smartphone. They also had a choice of doing their own design if they got our consent for it.

All of the students chose to do their own design, some of them being very smart and challenging and some simpler.

Making dice was a popular product, and were made by two students in various sizes.

Football board game and a key ring were made by two students.

A plastic bow tie and an action figure for á board game was made by two students.

Some pictures were taken of students work and students working.
