

THINK GREEN!

Since the beginning of the school year, the science teacher has discussed with the pupils issues such as the exploitation of our planet's resources, plastic pollution, air pollution, trying to raise children's awareness of the importance of correct separate waste collection, the recycling of materials, the reduction of waste to save our plane

After this first moment, an interview was administered to the children and their families. From this interview it appears that most of them respect the planet, adopting eco-sustainable behavior.

Finally, the children created drawings representing the problem of pollution and possible solutions for it save our planet.

INTERVIEW

Do you have an eco-sustainable behavior?
