Scuola Collodi

Coding project with Scratch for first graders, 6 years old

With the help of the teacher the students have prepared a grid on the floor on which they can move in 4 directions, up-down and right and left indicated with red and blue labels to help those who have not yet developed lateralization, when the teacher or other students give the order. With the help of the teachers we positioned the two characters, two students, on the grid and built the blocks of the game, inserting sounds, conversation, timers and scores.

We thought of a Christmas time story or in a winter scene by choosing a scene and characters: the reindeer and the elf playing.

The reindeer must reach the elf who magically moves and hides at the sound of the magic wand.

With the help of the teachers we positioned the two characters, the students, on the grid and built the blocks of the game, inserting sounds, conversation, timers and scores.

Enjoy!
