

## VIRTUAL REALITY

Virtual Reality is used in education more common than ever. Day by day its effect is getting wider in our world. You can have different experiences in, to wander around in an artificial world or visit popular places all over the world even in your living room.

For the December Task first of all we displayed the general Info about VR on our bulletin boards at school. By this way we can make our young students be aware of the VR. They can see how they can use it for their education and for fun.

On the other hand we cooperated with the private high School students and their IT teacher in our region and by this way we can make our students to experience the VR goggles. 10th grade students presented us their project which came first as a Roblox design project in the world in Estonia. (I add the presentation and the project to the file.) We have no VR goggles in our School so this cooperation is so nice for us.

First presentation

for the headteacher and our coordinator in their School.

We hosted them in our School with the children interested in Roblox and digital design.

It was a very great experience for our students to see such a project and wander around in some buildings special for Mustafa Kemal Atatürk and Turkish history. This project is about Atatürk for the 100th anniversary of Turkish Republic.

We also want to share the presentation and the link of the project.
