

ERASMUS

CLIMATE CHANGE

*Makedonitissas B'
Primary School
Nicosia, Cyprus
Year 2*

Project on climate change

- Year 2 children worked on the Erasmus' project for the climate change.
- The project was carried out on a cross- curricular basis on the following subjects: Greek, Arts, Music, Science.
- Firstly, the children carried out a research about the pollution of the environment and how this affects the climate change. The children proposed solutions to protect the environment and to improve human and animal life (Reduce, Reuse, Recycle, Zero Waste, Save energy).
- Then, we focused on a special kind of seal, called Monachus Monachus that lives mainly in Greek islands (Sporades). It is the most endangered animal in the Mediterranean sea. The children found information about the life of the seal Monachus, the danger that she is facing and how we can protect them.

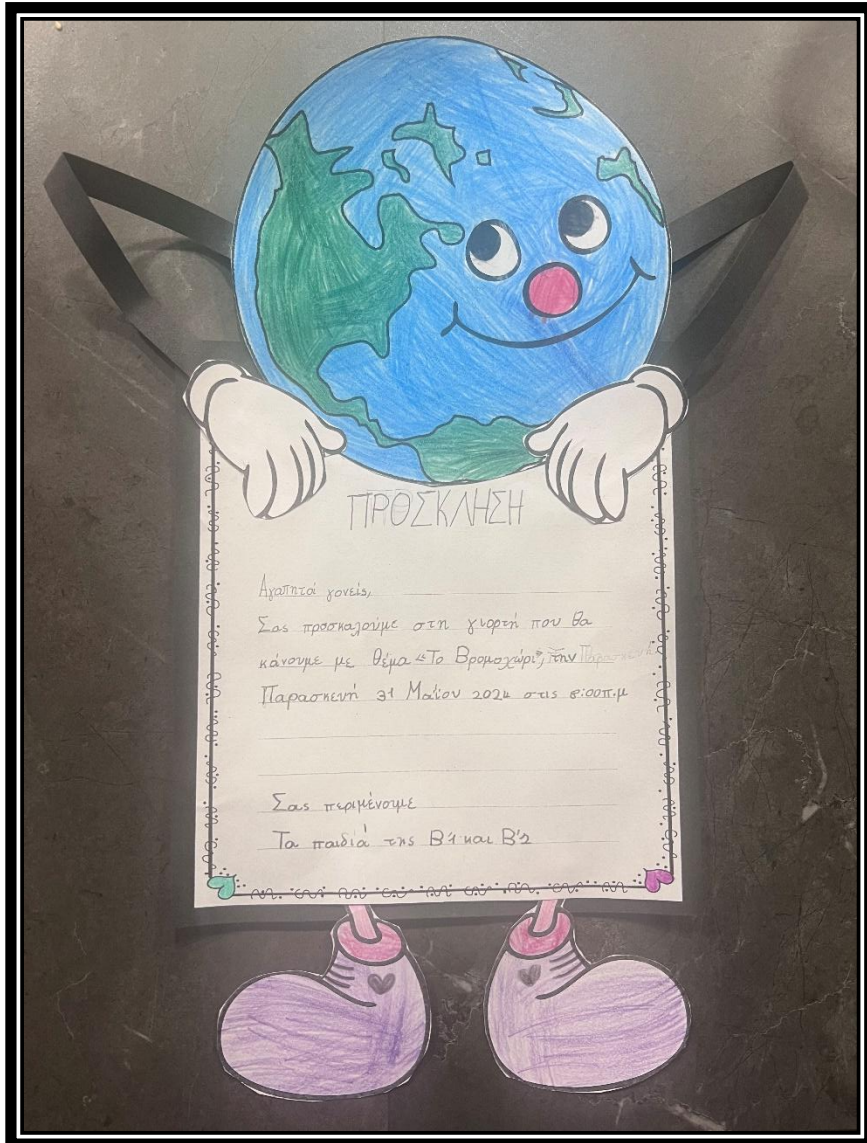

Seal monachus is in danger, please save her

Monachus Seal (Children's Artwork)

- At the end the children presented a theatre play to their parents. All year 2 students participated.

Parent's invitation made by students

- At the end of the play the parents worked with their children in the following environmental workshops:
 - making a bag using an old T-shirt*
 - making lip balm and soap using natural organic products*
 - making a blanket using old pieces of clothes*
 - turning a glass bottle into a nice candleholder using decoupage method*
